

ENSF 381

Full Stack Web Development

Lecture 02:

Foundations of Web Development

Slides: Ahmad Abdellatif, PhD

Instructor: Novarun Deb, PhD

Outline

- What is full stack development.
- An overview of frontend.
- Frontend technologies.
- An overview of backend.
- Backend technologies.

What is full stack development?

The process of **designing, developing, testing, and deploying** end-to-end web application.

It involves working with various technologies and tools:

- Front-end web development.
- Back-end web development.
- Database development.

Full stack application overview

Full stack application overview

What is frontend?

Everything a user sees and interacts with when they click on a link or type in a web address. It includes:

- Content and styles.
- Buttons.
- Links.
- Textboxes.
- Images.
- Videos.

Also called **client-side**

From Wikipedia, the free encyclopedia

The **University of Calgary** (**U of C** or **UCalgary**) is a [public research university](#) located in [Calgary, Alberta](#), Canada. The University of Calgary started in 1944 as the Calgary branch of the [University of Alberta](#), founded in 1908, prior to being instituted into a separate, autonomous university in 1966. It is composed of 14 faculties and over 85 research institutes and centres. The main campus is located in the northwest quadrant of the city near the Bow River and a smaller south campus is located in the city centre. The main campus houses most of the research facilities and works with provincial and federal research and regulatory agencies, several of which are housed next to the campus such as the [Geological Survey of Canada](#). The main campus covers approximately 200 [hectares](#) (490 acres).

A member of the [U15](#), the University of Calgary is also one of Canada's top research universities (based on the number of [Canada Research Chairs](#)). The university has a sponsored research revenue of \$380.4 million,^{[7][8]} with total revenues exceeding \$1.2 billion. The university maintains close ties to the petroleum and geoscience industry through the Department of [Geosciences](#) and the [Schulich School of Engineering](#).^[further explanation needed] The university also maintains several other departments and faculties, including the [Cumming School of Medicine](#), the [Faculty of Arts](#), the School of Public Policy, the [Faculty of Law](#), and the [Haskayne School of Business](#).^{[9][10][11]}

Notable former students include Canadian Prime Minister [Stephen Harper](#), [Java](#) programming language

Why frontend development is important?

Frontend development is essential for creating an aesthetically pleasing, user-friendly, and high-performing interface that **contributes significantly to the overall success of a website or web application.**

*“It takes users **0.05 seconds** to decide if your website is worth their time, and **2.6 seconds** to form a full impression about your website and your company”^[1]*

Frontend tools and technologies

- HyperText Markup Language (HTML): create content and layout of a webpage using semantic HTML.

HTML elements – example

Search for Classes

Enter Search Criteria

Search for Classes

Institution

Term

Dropdown box

Select at least 2 search criteria. Select Search to view your search results.

From today's featured article

Painting of the first day of the battle, with [HMS Namur](#) in the centre left.

The naval [Battle of Lagos](#) took place between a British fleet commanded by Sir [Edward Boscawen](#) and a French fleet under [Jean-François de La Clue-Spécourt](#) over 18–19 August 1759 during the [Seven Years' War](#). The French Mediterranean Fleet successfully passed through the [Strait of Gibraltar](#), but was sighted by a British ship. The British fleet in [Gibraltar](#) was undergoing a major refit and left port amidst great confusion, with many ships delayed and sailing in a second squadron. Aware that he was pursued, La Clue changed course, but half of his ships failed to follow him in the dark. The British caught the French south west of the [Gulf of Cádiz](#), fierce fighting ensued, and one French ship was captured. The British pursued the remaining six French ships overnight and two managed to escape. The four survivors attempted to shelter in [neutral](#) Portuguese waters near [Lagos](#), but Boscawen violated that neutrality, capturing two of the ships and destroying the other two. Full stack application overview

What is backend?

- Backend development is responsible for manipulating and storing user data.
- Backend contains the **business logic** of the web application.
- Pertains to the underlying processes and essential components responsible for the seamless and proper functioning of the front-end.
- Also called **server-side**.
- Users have no direct access to or interact with.

Why backend development is important?

- Creating, managing, and maintaining the type of database the product/service uses.
- Conducting data validation to verify the correct format of data before its storage in the database.
- Ensuring secure user interactions with their accounts.
- Managing interactions with third-party services.

Full stack application overview

Backend tools and technologies

Backend developers employ various tools and technologies in their daily tasks:

- PHP
- Python
- Ruby
- Java
- Node.js
- Django
- Flask
- Express
- Ruby on Rails

Frontend vs. backend

- **Responsibility:**

- Frontend: Concerned with the user interface.
- Backend: Manages server-side logic, database interactions, and application functionality.

- **Execution Environment:**

- Frontend: Runs in the user's browser, executing code locally.
- Backend: Operates on a server and interacting with databases.

Frontend vs. backend

- **Visibility:**

- Frontend: Visible to users and responsible for the visual aspects of the application.
- Backend: Invisible to users, working behind the scenes to process requests and manage data.

- **User Interaction:**

- Frontend: Directly interacts with users, presenting information and collecting input.
- Backend: Indirectly interacts with users through managing data and business logic.

Questions

Question...

Is it always essential to have a backend or frontend?

- The necessity of a backend or frontend depends on the specific requirements and functionalities of the project.
- In some cases, both may be essential, while in others, one or the other may suffice.
